I own all of the early relay controlled Akai models such as the 250D, the GX-280D, the GX-285D as well as the SS models GX-280D-SS and GX-297D-SS. I like the 280D very much. It's a vintage 1972 unit so you cannot compare it to the much later RT-707 Pioneer deck. After replacing all the capacitors and a few transistors the 280 performs well.

Akai GX-280D-SS speed problem: Play whether forward or reverse, too fast, very fast. Changing the Tape Speed buttons has no effect, stays the same. This is all direct drive, no belts except one for the counter. I made sure the 50/60hz button is in 60hz. The voltage is set for 120v input. The capstan properly engages.

The new Akai Model GX-280D employs a first rate quality 3-motor system. The most crucially important capstan drive motor is an epoch-making direct capstan drive servo motor which combines the winding control of the ordinary eddy-current motor and a speed detecting toothed cog-wheel into a single structure mechanism.
