Laplace Transform | Advance Engineering Mathematics Review

Laplace Transform in Engineering Analysis Laplace transform is a mathematical operation that is used to "transform" a variable (such as x , or y , or z in space, or at time t) to a parameter (s) - a "constant" under certain conditions. It transforms ONE variable at a time. Mathematically, it can be expressed as:

Laplace Transformation & Its Application. 14. Solving Partial Differential Equation Problem: Solve with the boundary conditions $U(x, 0) = 3 \sin 2\pi x$, $U(0, t) = 0$ and $U(1, t) = 0$ where $0 < x < 1$, $t > 0$. Solution: \square Taking Laplace transform of both sides with respect to t , \square Substituting in the value of $U(x, 0)$ and rearranging,...
