IEEE 1471 - Wikipedia

The architecture of a software system is a metaphor, analogous to the architecture of a building. For example, the systems that controlled the space shuttle launch vehicle had the requirement of being very fast and very reliable. Therefore, an appropriate real-time computing language would need to be chosen.

IEEE 1471:2000, Recommended Practice for Architectural Description of Software-intensive Systems, was the first formal standard addressing the architecture of systems, where "the term system encompasses individual appli- cations, systems in the traditional sense, subsystems, systems of systems, product lines, product families, whole

Software architecture - Wikipedia

Abstract The pervasiveness of the communication networks increasingly has made possible to interconnect software-intensive systems that were independently developed, operated, managed, and evolved, yielding a new kind of complex system, that is, a system that is itself composed of systems, the so-called System-of-Systems (SoS).
