chapter, we will model three elements: resistors, independent and dependent sources. The types of circuits that are primarily studied in circuits are low voltage circuits (which mean that Kirchoff's laws can be applied). The common model used to give you the feel for the circuit is the "water flow" model.

draw circuit models on the board or in quizzes and exams, we assume that ideal elements are intended, unless otherwise stated. To solve circuits involving capacitors and inductors, we require differential equations. Therefore we will postpone these circuit elements until later in the course and deal for the moment with sources and resistors only.
