Cost-volume-profit (CVP) analysis. is used to determine how changes in costs and volume affect a company's operating income and net income. In performing this analysis, there are several assumptions made, including: Sales price per unit is constant. Variable costs per unit are constant. Total fixed costs are constant. Everything produced is sold.

Cost-volume-profit (CVP) analysis. Total revenue is \$ 120,000 for sales of 6,000 tapes ( $\$ 20 \text{ per unit} \times 6,000 \text{ units sold}$ ). In the chart, we demonstrate the effect of volume on revenue, costs, and net income, for a particular price, variable cost per unit, and fixed cost per period. At each volume, one can estimate the company's profit or loss.
