Hepatotoxicity - Wikipedia

Drug-induced liver injury (DILI) is the 4 th most important cause of liver disease in Western countries[1]. The incidence of DILI is between 1/10000 and 1/100000 patients-years[2, 3]. The drugs used in psychiatry and neurology are the second most important group of drugs implicated in hepatotoxicity, after anti-infectious drugs[4].

Drugs and Liver Disease | Signs of Drug-Induced Liver Injury

While the frequency of drug-induced liver disease remains low, a large case-series of acute drug-induced liver disease from Spain and Sweden supported the observation that acute hepatocellular jaundice from a drug is associated with death or the need for transplant in at least 10% (known as Hy's Law).
