Human Physiology/Appendix 1: answers to review questions. From Wikibooks, open books for an open world ... An example of the urinary system working with the respiratory system to regulate blood pH would be A) When you hold your breath the kidneys will remove CO2 from your blood B) If you exercise a lot your urine will become more acidic ...

~~Anatomy Review Urinary System Answers | Download Pdf/ePub~~

The organ system that performs this function in humans—the urinary system—is the topic of this chapter. The organs of the urinary system are organs of excretion—they remove wastes and water from the body. Specifically, the urinary system “cleans the blood” of metabolic wastes, which are substances produced by the body that it cannot

Interactive Physiology Worksheet: Urinary System: Late Filtrate Processing 1. Name the two types of cells in the cortical collecting ducts and describe their function. 1. principal- regulate h2o and Na+ reabsorption and K+ secretion 2. intercalated- help balance pH by secreting H+ ions into the filtrate. 2. a.

~~Pearson~~

Anatomy of the Urinary System. The urinary system consists of two kidneys, two ureters, a urinary bladder, and a urethra. The kidneys alone perform the functions just described and manufacture urine in the process, while the other organs of the urinary system provide temporary storage reservoirs for urine or serve as transportation channels to carry it from one body region to another.
