~~Security vs. usability: Does there have to be a compromise?~~  
security and usability techniques were used in a research and  
development project to develop webinos — a secure, cross-  
platform software environment for web applications.

~~Security and usability : designing secure systems that ...~~  
1. Secure by design and by default Legacy security products  
often failed because usability was not treated as an equally  
important design priority. Security and usability can't be added  
once the technology has been developed but should be an  
integral part of the product design process from the start.

## ~~Security and Usability—The State of Security~~

Human factors and usability issues have traditionally played a limited role in security research and secure systems development. Security experts have largely ignored usability issues--both because they often failed to recognize the importance of human factors and because they lacked the expertise to address them.
